

THE VENUETIZE MOBILE WALLET

Your guests have countless payment options when it comes to transacting. When looking for a solution, you want to offer them more than just a digital way to pay.

More integrations, **more** ways to pay, **more** ways to engage and reward your guests and corporate partners.

PRODUCT BENEFITS

- **Increased Revenue:** Drive higher transaction volumes, larger order amounts, and greater order frequency.
- **Speed and Convenience:** Decrease transaction time to order and pay, shortening concessions lines.
- **Comprehensive Data Sets:** Obtain transactional data to better understand guest behavior and provide more personalized communications and contextually relevant experiences.
- **Security and Fraud Protection:** Card information in the Mobile Wallet is encrypted. QR Countdown Timer and Refresh every 30 seconds. Guests are protected from traditional means of fraud and theft.

PRODUCT CAPABILITIES AND FEATURES

- **Deployment:** Full Native Application, Progressive Web Application (PWA), API, or SDK.
- **Purchases:** Mobile ordering and point-of-sale kiosks | Credit, debit, ticket-based loaded value (e.g., Ticketmaster), sponsorship value, promotional value, and digital gift cards.
- **Split Payments:** Option to use multiple methods of payment for transactions. Guests can use a single QR code scan combining discounts with payment method.
- **Tipping:** Option of tipping (customizable) on each card prior to checkout or after checkout.
- **Transfer Benefits/Value:** Transfer of benefits and value for any event.
- **Sponsorship Activation:** Offer your partners the ability to activate their brand through sponsorship value available in the Mobile Wallet.
- **Spend X Get Y:** Option to earn rewards to use in wallet based on purchasing behavior.
- **Single Scan with Multiple Functionality:** Certifications with multiple payment gateways so that we can take VISA, Mastercard, American Express. Through payment tokens, guests do not have to reload their card every single time.

**Complete features and functionality is dependent on method of deployment and technology ecosystem.*
